Method notes

Mobile phase A: water + 0.1% TFA. Mobile phase B: acetonitrile + 0.1% TFA.
Gradient: 5–65% B over 12 min, 1.0 mL/min, column 30 °C, injection 10 µL.
Purity = (main peak area / sum of integrated peak areas) × 100.
Salts, counter-ions and residual water are not quantified by UV and are not reported as HPLC impurities.
Mass confirmation by positive-mode ESI. Acceptance: observed mass within ±0.5 Da of theory for this peptide class.
