Statement

The results above describe the sample as received under the sample reference on this certificate. They do not certify any other vial, lot, or subsequent handling. HPLC purity is chromatographic area percent and is not net peptide content. Identity is intact-mass agreement with the theoretical mass of the named sequence.

Electronically issued. Verify at the URL encoded in the QR code. Printed copies are uncontrolled.
NorthPeak Analytical Ltd. does not manufacture or sell peptides.

Method notes

Mobile phase A: water + 0.1% TFA. Mobile phase B: acetonitrile + 0.1% TFA.
Gradient: 5–65% B over 12 min, 1.0 mL/min, column 30 °C, injection 10 µL.
Purity = (main peak area / sum of integrated peak areas) × 100.
Salts, counter-ions and residual water are not quantified by UV and are not reported as HPLC impurities.
Mass confirmation by positive-mode ESI. Acceptance: observed mass within ±0.5 Da of theory for this peptide class.
